Applied Data Mining Homework 04

Xun Zhao, xz2827

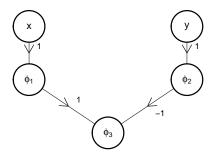

Problem 1:

The function f can be interpreted as:

$$f(x, y) = I\{g(x, y) > 0\}$$

$$g(x, y) = \sigma(x) - \sigma(y)$$

So the network is:

Here, the three ϕ nodes are:

$$\phi_1(\cdot) = \sigma(\cdot)$$

$$\phi_2(\cdot) = \sigma(\cdot)$$

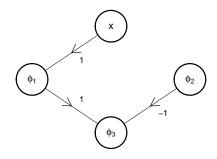

$$\phi_3(\cdot) = I\{\cdot > 0\}$$

Problem 2:

According to the defination of sigmoid function, $\sigma(x) = \frac{1}{1+e^{-x}}$, we can get:

$$-\sigma(-x) = -\frac{1}{1+e^x}$$
$$= \frac{e^x}{1+e^x} - 1$$
$$= \frac{1}{e^{-x}+1} - 1$$
$$= \sigma(x) - 1$$

So, the network is:

Here, the three ϕ nodes are:

$$\phi_1(\cdot) = \sigma(\cdot)$$

$$\phi_2(\cdot) = c = 1$$

$$\phi_3(\cdot) = \cdot$$

Problem 3:

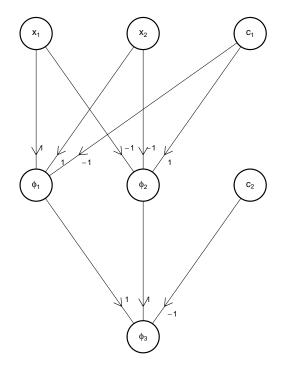

According basic logical relationship:

$$x \oplus y = (x = y = 1) \lor (x = y = 0)$$
$$= (x \land y) \lor (\neg x \land \neg y)$$

So, the network is the or of two and.

The single unit of and can be presented as $f(x, y) = I\{x + y > 1\}$. And the single unit of or can be presented as $f(x, y) = I\{x + y > 0\}$

So the network is:

Here, the bias nodes are:

$$c_1 = 1$$

$$c_1 = 1$$
$$c_2 = 1$$

And other three ϕ nodes are:

$$\phi_1(\cdot) = I\{\cdot > 0\}$$

$$\phi_2(\cdot) = I\{\cdot > 0\}$$

$$\phi_1(\cdot) = I\{\cdot > 0\}$$

 $\phi_2(\cdot) = I\{\cdot > 0\}$
 $\phi_3(\cdot) = I\{\cdot > 0\}$

Problem 4:

Classification function is:

$$f(\vec{x}) = \phi(\vec{x} \cdot \vec{w} + w_c \cdot c)$$
$$= I\{\vec{x} \cdot \vec{w} \ge c\}$$

So, the classification result of \vec{x} is:

$$f(\vec{x}) = I\left\{ \begin{pmatrix} -3\\0 \end{pmatrix} \cdot \begin{pmatrix} \frac{1}{\sqrt{2}}\\\frac{1}{\sqrt{2}} \end{pmatrix} - \frac{1}{2\sqrt{2}} > 0 \right\}$$
$$= I\left\{ -\frac{3}{\sqrt{2}} - \frac{1}{2\sqrt{2}} > 0 \right\}$$
$$= I\left\{ -\frac{7}{2\sqrt{2}} > 0 \right\}$$
$$= 0$$

And the classification reuslt of $\vec{x'}$ is:

$$\begin{split} f(\vec{x'}) &= I\{ \begin{pmatrix} \frac{1}{2} \\ \frac{1}{2} \end{pmatrix} \cdot \begin{pmatrix} \frac{1}{\sqrt{2}} \\ \frac{1}{\sqrt{2}} \end{pmatrix} - \frac{1}{2\sqrt{2}} > 0 \} \\ &= I\{ \frac{1}{\sqrt{2}} - \frac{1}{2\sqrt{2}} > 0 \} \\ &= I\{ \frac{1}{2\sqrt{2}} > 0 \} \\ &= 1 \end{split}$$

Problem 5:

$$\vec{x} \cdot \vec{y} = e^{\log(x_1) + \log(y_1)} + e^{\log(x_2) + \log(y_2)}$$

The network is:
